

Figure 2(a). Lag–response relationship for one day of exposure to the 99th versus the 50th percentile of heat index distributions.

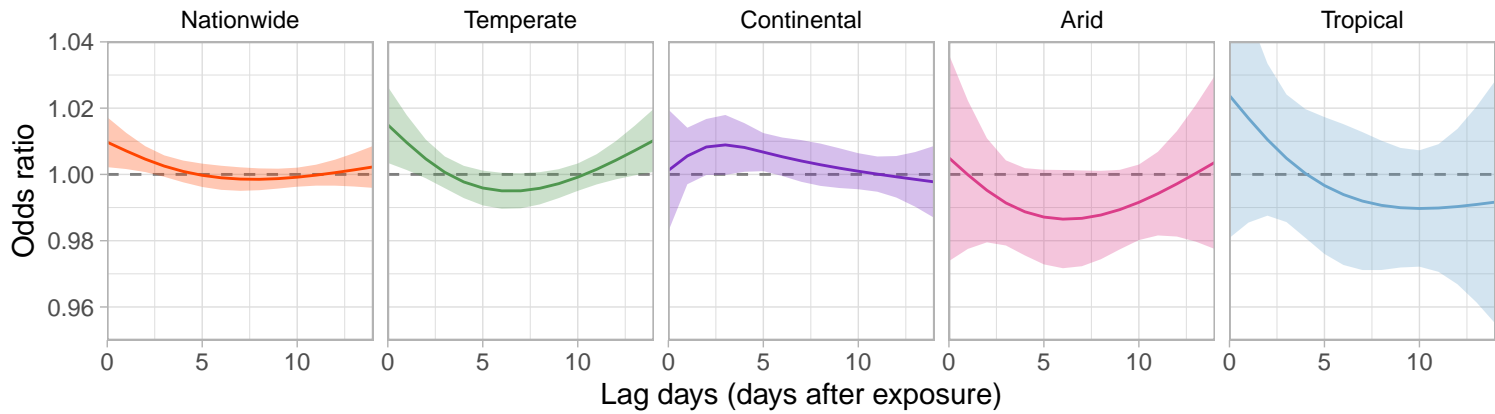

Figure 2(b). Cumulative effects of multiple days of sustained exposure to the 99th versus 50th percentile of heat index distributions.

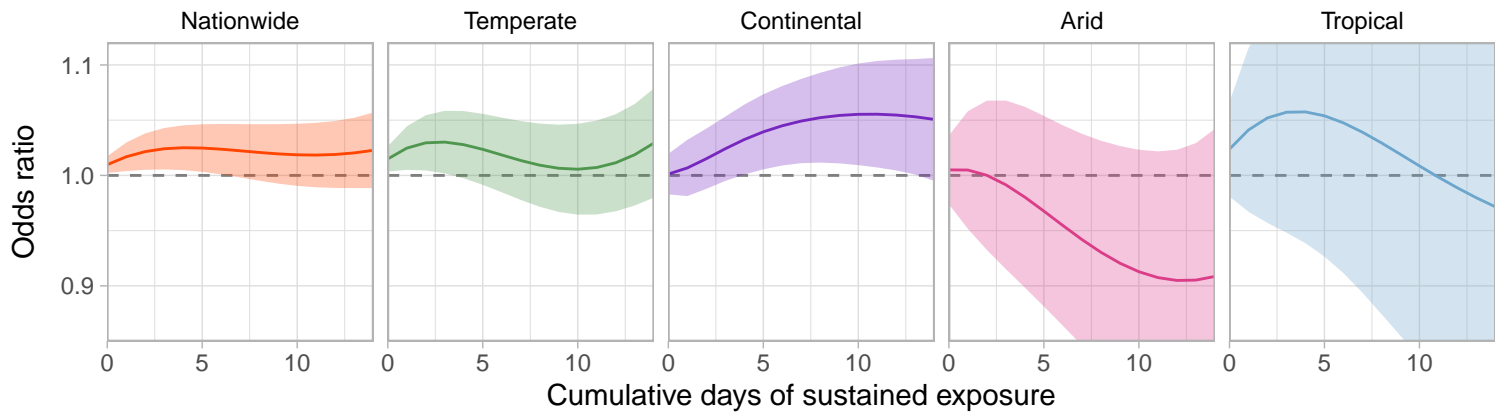

Figure 2(c). Exposure–response relationship after three days of sustained exposure to elevated heat index percentiles versus the 50th percentile of heat index distributions.
